Computer Vision Using Local Binary Patterns: 40 (Computational Imaging and Vision) Matti Pietikäinen, Abdenour Hadid, Guoying Zhao, Timo Ahonen

The recent emergence of Local Binary Patterns (LBP) has led to significant progress in applying texture methods to various computer vision problems and applications. The focus of this research has broadened from 2D textures to 3D textures and spatiotemporal (dynamic) textures. Also, where texture was once utilized for applications such as remote sensing, industrial inspection and biomedical image analysis, the introduction of LBP-based approaches have provided outstanding results in problems relating to face and activity analysis, with future scope for face and facial expression recognition, biometrics, visual surveillance and video analysis.

Computer Vision Using Local Binary Patterns provides a detailed description of the LBP methods and their variants both in spatial and spatiotemporal domains. This comprehensive reference also provides an excellent overview as to how texture methods can be utilized for solving different kinds of computer vision and image analysis problems. Source codes of the basic LBP algorithms, demonstrations, some databases and a comprehensive LBP bibliography can be found from an accompanying web site.

Topics include: local binary patterns and their variants in spatial and spatiotemporal domains, texture classification and segmentation, description of interest regions, applications in image retrieval and 3D recognition - Recognition and segmentation of dynamic textures, background subtraction, recognition of actions, face analysis using still images and image sequences, visual speech recognition and LBP in various applications.

Written by pioneers of LBP, this book is an essential resource for researchers, professional engineers and graduate students in computer vision, image analysis and pattern recognition. The book will also be of interest to all those who work with specific applications of machine vision.

From reader reviews:

Andrew Garcia:

Have you spare time for the day? What do you do when you have a lot more or little spare time? Yeah, you can choose the suitable activity to get spend your time. Any person spent their spare time to take a go walking, shopping, or went to often the Mall. How about open as well as read a book called Computer Vision Using Local Binary Patterns: 40 (Computational Imaging and Vision)? Maybe it is being best activity for you. You know beside you can spend your time with your favorite's book, you can better than before. Do you agree with their opinion or you have various other opinion?

Judith Carter:

Reading can called thoughts hangout, why? Because while you are reading a book specially book entitled Computer Vision Using Local Binary Patterns: 40 (Computational Imaging and Vision) your thoughts will drift away trough every dimension, wandering in each aspect that maybe unknown for but surely can become your mind friends. Imaging every word written in a reserve then become one web form conclusion and explanation this maybe you never get ahead of. The Computer Vision Using Local Binary Patterns: 40 (Computational Imaging and Vision) giving you one more experience more than blown away your thoughts but also giving you useful information for your better life with this era. So now let us show you the relaxing pattern the following is your body and mind is going to be pleased when you are finished reading through it, like winning a sport. Do you want to try this extraordinary investing spare time activity?

Ann Wheeler:

Does one one of the book lovers? If yes, do you ever feeling doubt if you are in the book store? Aim to pick one book that you find out the inside because don't evaluate book by its protect may doesn't work at this point is difficult job because you are frightened that the inside maybe not as fantastic as in the outside appearance likes. Maybe you answer may be Computer Vision Using Local Binary Patterns: 40 (Computational Imaging and Vision) why because the fantastic cover that make you consider in regards to the content will not disappoint a person. The inside or content is usually fantastic as the outside as well as cover. Your reading 6th sense will directly show you to pick up this book.

Catherine Ng:

As a college student exactly feel bored to be able to reading. If their teacher inquired them to go to the library in order to make summary for some guide, they are complained. Just tiny students that has reading's spirit or real their hobby. They just do what the professor want, like asked to go to the library. They go to generally there but nothing reading very seriously. Any students feel that studying is not important, boring along with can't see colorful images on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this age, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Computer Vision Using Local Binary Patterns: 40 (Computational

Imaging and Vision) can make you really feel more interested to read.
