Semantic Models for Multimedia Database Searching and Browsing (Advances in Database Systems)

Shu-Ching Chen, R.L. Kashyap, Arif Ghafoor

Semantic Models for Multimedia Database Searching and Browsing begins with the introduction of multimedia information applications, the need for the development of the multimedia database management systems (MDBMSs), and the important issues and challenges of multimedia systems. The temporal relations, the spatial relations, the spatio-temporal relations, and several semantic models for multimedia information systems are also introduced. In addition, this book discusses recent advances in multimedia database searching and multimedia database browsing. More specifically, issues such as image/video segmentation, motion detection, object tracking, object recognition, knowledge-based event modeling, content-based retrieval, and key frame selections are presented for the first time in a single book. Two case studies consisting of two semantic models are included in the book to illustrate how to use semantic models to design multimedia information systems.

Semantic Models for Multimedia Database Searching and Browsing is an excellent reference and can be used in advanced level courses for researchers, scientists, industry professionals, software engineers, students, and general readers who are interested in the issues, challenges, and ideas underlying the current practice of multimedia presentation, multimedia database searching, and multimedia browsing in multimedia information systems.

From reader reviews:

Sergio Espinoza:

Book is actually written, printed, or highlighted for everything. You can understand everything you want by a e-book. Book has a different type. As we know that book is important issue to bring us around the world. Alongside that you can your reading ability was fluently. A reserve Semantic Models for Multimedia Database Searching and Browsing (Advances in Database Systems) will make you to be smarter. You can feel more confidence if you can know about almost everything. But some of you think which open or reading any book make you bored. It isn't make you fun. Why they could be thought like that? Have you seeking best book or acceptable book with you?

Kenneth Clark:

What do you think of book? It is just for students as they are still students or the idea for all people in the world, the particular best subject for that? Only you can be answered for that issue above. Every person has diverse personality and hobby for every other. Don't to be obligated someone or something that they don't want do that. You must know how great along with important the book Semantic Models for Multimedia Database Searching and Browsing (Advances in Database Systems). All type of book would you see on many sources. You can look for the internet methods or other social media.

Dorothy Payne:

The book Semantic Models for Multimedia Database Searching and Browsing (Advances in Database Systems) has a lot info on it. So when you check out this book you can get a lot of help. The book was authored by the very famous author. Mcdougal makes some research previous to write this book. This particular book very easy to read you can get the point easily after reading this book.

Scott Padilla:

People live in this new day of lifestyle always aim to and must have the extra time or they will get lot of stress from both everyday life and work. So , once we ask do people have spare time, we will say absolutely yes. People is human not really a robot. Then we ask again, what kind of activity do you possess when the spare time coming to you actually of course your answer will probably unlimited right. Then do you ever try this one, reading ebooks. It can be your alternative with spending your spare time, typically the book you have read is definitely Semantic Models for Multimedia Database Searching and Browsing (Advances in Database Systems).
