Parallel Programming: for Multicore and Cluster Systems Thomas Rauber, Gudula Rünger

Innovations in hardware architecture, like hyper-threading or multicore processors, mean that parallel computing resources are available for inexpensive desktop computers. In only a few years, many standard software products will be based on concepts of parallel programming implemented on such hardware, and the range of applications will be much broader than that of scientific computing, up to now the main application area for parallel computing.

Rauber and Rünger take up these recent developments in processor architecture by giving detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers. Their book is structured in three main parts, covering all areas of parallel computing: the architecture of parallel systems, parallel programming models and environments, and the implementation of efficient application algorithms. The emphasis lies on parallel programming techniques needed for different architectures. For this second edition, all chapters have been carefully revised. The chapter on architecture of parallel systems has been updated considerably, with a greater emphasis on the architecture of multicore systems and adding new material on the latest developments in computer architecture. Lastly, a completely new chapter on general-purpose GPUs and the corresponding programming techniques has been added.

The main goal of the book is to present parallel programming techniques that can be used in many situations for a broad range of application areas and which enable the reader to develop correct and efficient parallel programs. Many examples and exercises are provided to show how to apply the techniques. The book can be used as both a textbook for students and a reference book for professionals. The material presented has been used for courses in parallel programming at different universities for many years.

From reader reviews:

Ross Jackson:

Book is to be different for each grade. Book for children right up until adult are different content. As we know that book is very important for all of us. The book Parallel Programming: for Multicore and Cluster Systems had been making you to know about other information and of course you can take more information. It is quite advantages for you. The book Parallel Programming: for Multicore and Cluster Systems is not only giving you a lot more new information but also to get your friend when you feel bored. You can spend your own personal spend time to read your guide. Try to make relationship while using book Parallel Programming: for Multicore and Cluster Systems. You never feel lose out for everything should you read some books.

Cheryl Kirkland:

Often the book Parallel Programming: for Multicore and Cluster Systems will bring one to the new experience of reading the book. The author style to spell out the idea is very unique. When you try to find new book you just read, this book very acceptable to you. The book Parallel Programming: for Multicore and Cluster Systems is much recommended to you you just read. You can also get the e-book in the official web site, so you can more easily to read the book.

Garth McDonald:

Do you one of the book lovers? If so, do you ever feeling doubt if you find yourself in the book store? Attempt to pick one book that you find out the inside because don't ascertain book by its cover may doesn't work is difficult job because you are frightened that the inside maybe not because fantastic as in the outside seem likes. Maybe you answer might be Parallel Programming: for Multicore and Cluster Systems why because the wonderful cover that make you consider about the content will not disappoint anyone. The inside or content is fantastic as the outside or maybe cover. Your reading 6th sense will directly direct you to pick up this book.

Gail Nugent:

A lot of book has printed but it is unique. You can get it by world wide web on social media. You can choose the most effective book for you, science, amusing, novel, or whatever through searching from it. It is referred to as of book Parallel Programming: for Multicore and Cluster Systems. Contain your knowledge by it. Without leaving the printed book, it could possibly add your knowledge and make anyone happier to read. It is most crucial that, you must aware about reserve. It can bring you from one destination for a other place.
