Gene Profiles in Drug Design

Gene Profiles in Drug Design

With the successful mapping of the human genome, we have entered an age of unprecedented opportunity in which researchers are beginning to apply this vast repository of knowledge to the treatment of human disease. Gene-profiling technologies and the concept of individualized medicine are leading to the development of drugs with enhanced specificity. This promises to lead to more effective treatment of diseases with reduced risk of side effects.

Gene Profiling in Drug Design provides insights from leaders in the pure sciences, biotechnology, and other arenas. It emphasizes the science that underpins gene profiling and drug development, and also includes clinical and ethical perspectives from experts in those fields. These explore the broadest health and social implications for this exciting field of science and discovery.

The book begins with a discussion of the future clinical impact of genetic diagnosis and gene-based drug therapies. Virally encoded MicroRNA is reviewed, as well as the development of gene-profile-responsive antisense agents. Gene profiles are studied with respect to drug development and cancer research. RNA viruses and RNA-based drugs are also examined. Finally, ethical considerations of this groundbreaking technology are explored.

The information presented in this volume provides readers with a greater understanding of the processes and technologies in gene-profile based drug design. Technologies are discussed in sufficient detail so that drug developers can use the book as a general desk reference. It also provides physicians with an important survey of emerging technologies.

This book is edited by Brett A. Lidbury and Suresh Mahalingam, noted scientists from the Centre for Biomolecular and Chemical Sciences at the University of Canberra in Australia. They bring together the wisdom of numerous experts to discuss the powerful ways that these new genetic technologies can save lives and improve health.

From reader reviews:

Eric Totten:

Book is written, printed, or highlighted for everything. You can learn everything you want by a publication. Book has a different type. As you may know that book is important thing to bring us around the world. Adjacent to that you can your reading ability was fluently. A e-book Gene Profiles in Drug Design will make you to end up being smarter. You can feel a lot more confidence if you can know about everything. But some of you think which open or reading a book make you bored. It isn't make you fun. Why they can be thought like that? Have you in search of best book or acceptable book with you?

Ray Ellis:

Reading a reserve tends to be new life style on this era globalization. With reading you can get a lot of information that will give you benefit in your life. Having book everyone in this world may share their idea. Textbooks can also inspire a lot of people. Plenty of author can inspire their own reader with their story as well as their experience. Not only the storyplot that share in the textbooks. But also they write about the ability about something that you need example. How to get the good score toefl, or how to teach children, there are many kinds of book which exist now. The authors on earth always try to improve their talent in writing, they also doing some study before they write with their book. One of them is this Gene Profiles in Drug Design.

Valarie Chamberlin:

The book untitled Gene Profiles in Drug Design contain a lot of information on the item. The writer explains your girlfriend idea with easy means. The language is very clear to see all the people, so do certainly not worry, you can easy to read that. The book was compiled by famous author. The author gives you in the new period of literary works. It is possible to read this book because you can read more your smart phone, or model, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can wide open their official web-site in addition to order it. Have a nice examine.

Steven Murray:

Reading a book make you to get more knowledge from this. You can take knowledge and information from a book. Book is published or printed or highlighted from each source that will filled update of news. On this modern era like today, many ways to get information are available for an individual. From media social including newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your understanding by that book. Ready to spend your spare time to open your book? Or just in search of the Gene Profiles in Drug Design when you essential it?
