On the surface, matrix theory and graph theory seem like very different branches of mathematics. However, adjacency, Laplacian, and incidence matrices are commonly used to represent graphs, and many properties of matrices can give us useful information about the structure of graphs.

Applications of Combinatorial Matrix Theory to Laplacian Matrices of Graphs is a compilation of many of the exciting results concerning Laplacian matrices developed since the mid 1970s by well-known mathematicians such as Fallat, Fiedler, Grone, Kirkland, Merris, Mohar, Neumann, Shader, Sunder, and more. The text is complemented by many examples and detailed calculations, and sections followed by exercises to aid the reader in gaining a deeper understanding of the material. Although some exercises are routine, others require a more in-depth analysis of the theorems and ask the reader to prove those that go beyond what was presented in the section.

Matrix-graph theory is a fascinating subject that ties together two seemingly unrelated branches of mathematics. Because it makes use of both the combinatorial properties and the numerical properties of a matrix, this area of mathematics is fertile ground for research at the undergraduate, graduate, and professional levels. This book can serve as exploratory literature for the undergraduate student who is just learning how to do mathematical research, a useful "start-up" book for the graduate student beginning research in matrix-graph theory, and a convenient reference for the more experienced researcher.

From reader reviews:

Lisa Hegland:

Have you spare time for any day? What do you do when you have much more or little spare time? Sure, you can choose the suitable activity intended for spend your time. Any person spent their particular spare time to take a move, shopping, or went to the particular Mall. How about open or read a book titled Applications of Combinatorial Matrix Theory to Laplacian Matrices of Graphs (Discrete Mathematics and Its Applications)? Maybe it is being best activity for you. You understand beside you can spend your time using your favorite's book, you can more intelligent than before. Do you agree with its opinion or you have various other opinion?

Raymond Roth:

Book will be written, printed, or highlighted for everything. You can know everything you want by a book. Book has a different type. As it is known to us that book is important point to bring us around the world. Beside that you can your reading proficiency was fluently. A publication Applications of Combinatorial Matrix Theory to Laplacian Matrices of Graphs (Discrete Mathematics and Its Applications) will make you to become smarter. You can feel a lot more confidence if you can know about every little thing. But some of you think that will open or reading any book make you bored. It's not make you fun. Why they can be thought like that? Have you trying to find best book or acceptable book with you?

Pam Wright:

In this 21st hundred years, people become competitive in most way. By being competitive currently, people have do something to make them survives, being in the middle of typically the crowded place and notice simply by surrounding. One thing that at times many people have underestimated that for a while is reading. Yeah, by reading a e-book your ability to survive boost then having chance to stay than other is high. To suit your needs who want to start reading some sort of book, we give you this Applications of Combinatorial Matrix Theory to Laplacian Matrices of Graphs (Discrete Mathematics and Its Applications) book as beginner and daily reading book. Why, because this book is usually more than just a book.

Betty Walsh:

Reading can called imagination hangout, why? Because when you find yourself reading a book specially book entitled Applications of Combinatorial Matrix Theory to Laplacian Matrices of Graphs (Discrete Mathematics and Its Applications) your mind will drift away trough every dimension, wandering in every aspect that maybe unidentified for but surely can be your mind friends. Imaging just about every word written in a book then become one application form conclusion and explanation this maybe you never get prior to. The Applications of Combinatorial Matrix Theory to Laplacian Matrices of Graphs (Discrete Mathematics and Its Applications) giving you another experience more than blown away your head but also giving you useful information for your better life on this era. So now let us demonstrate the relaxing pattern here is your body and mind will likely be pleased when you are finished reading it, like winning a. Do you

want to try this extraordinary investing spare time activity?
