Statistical Methods in Bioinformatics (Statistics for Biology and Health) Warren J. Ewens

Advances in computers and biotechnology have had a profound impact on biomedical research, and as a result complex data sets can now be generated to address extremely complex biological questions. Correspondingly, advances in the statistical methods necessary to analyze such data are following closely behind the advances in data generation methods. The statistical methods required by bioinformatics present many new and difficult problems for the research community. This book provides an introduction to some of these new methods. The main biological topics treated include sequence analysis, BLAST, microarray analysis, gene finding, and the analysis of evolutionary processes. The main statistical techniques covered include hypothesis testing and estimation, Poisson processes, Markov models and Hidden Markov models, and multiple testing methods. The second edition features new chapters on microarray analysis and on statistical inference, including a discussion of ANOVA, and discussions of the statistical theory of motifs and methods based on the hypergeometric distribution. Much material has been clarified and reorganized. The book is written so as to appeal to biologists and computer scientists who wish to know more about the statistical methods of the field, as well as to trained statisticians who wish to become involved with bioinformatics. The earlier chapters introduce the concepts of probability and statistics at an elementary level, but with an emphasis on material relevant to later chapters and often not covered in standard introductory texts. Later chapters should be immediately accessible to the trained statistician. Sufficient mathematical background consists of introductory courses in calculus and linear algebra. The basic biological concepts that are used are explained, or can be understood from the context, and standard mathematical concepts are summarized in an Appendix. Problems are provided at the end of each chapter allowing the reader to develop aspects of the theory outlined in the main text. Warren J. Ewens holds the Christopher H. Brown Distinguished Professorship at the University of Pennsylvania. He is the author of two books, Population Genetics and Mathematical Population Genetics. He is a senior editor of Annals of Human Genetics and has served on the editorial boards of Theoretical Population Biology, GENETICS, Proceedings of the Royal Society B and SIAM Journal in Mathematical Biology. He is a fellow of the Royal Society and the Australian Academy of Science. Gregory R. Grant is a senior bioinformatics researcher in the University of Pennsylvania Computational Biology and Informatics Laboratory. He obtained his Ph.D. in number theory from the University of Maryland in 1995 and his Masters in Computer Science from the University of Pennsylvania in 1999. Comments on the first edition: 'This book would be an ideal text for a postgraduate course...[and] is equally well suited to individual study.... I would recommend the book highly.' (Biometrics) 'Ewens and Grant have given us a very welcome introduction to what is behind those pretty [graphical user] interfaces.' (Naturwissenschaften) 'The authors do an excellent job of presenting the essence of the material without getting bogged down in mathematical details.' (Journal American Statistical Association) 'The authors have restructured classical material to a great extent and the new organization of the different topics is one of the outstanding services of the book.' From reader reviews:

Julian Lored:

Nowadays reading books be than want or need but also work as a life style. This reading addiction give you lot of advantages. Advantages you got of course the knowledge the rest of the information inside the book that will improve your knowledge and information. The knowledge you get based on what kind of guide you read, if you want attract knowledge just go with education and learning books but if you want really feel happy read one with theme for entertaining including comic or novel. Typically the Statistical Methods in Bioinformatics (Statistics for Biology and Health) is kind of reserve which is giving the reader unstable experience.

Salvador Perez:

Hey guys, do you would like to finds a new book to learn? May be the book with the headline Statistical Methods in Bioinformatics (Statistics for Biology and Health) suitable to you? The particular book was written by well known writer in this era. The book untitled Statistical Methods in Bioinformatics (Statistics for Biology and Health) is a single of several books that will everyone read now. This specific book was inspired many men and women in the world. When you read this publication you will enter the new shape that you ever know ahead of. The author explained their idea in the simple way, therefore all of people can easily to know the core of this guide. This book will give you a wide range of information about this world now. In order to see the represented of the world in this particular book.

David Black:

Don't be worry for anyone who is afraid that this book can filled the space in your house, you could have it in e-book way, more simple and reachable. This particular Statistical Methods in Bioinformatics (Statistics for Biology and Health) can give you a lot of close friends because by you investigating this one book you have matter that they don't and make you more like an interesting person. This particular book can be one of a step for you to get success. This guide offer you information that probably your friend doesn't understand, by knowing more than other make you to be great folks. So , why hesitate? We should have Statistical Methods in Bioinformatics (Statistics for Biology and Health).

Teresa Burns:

Do you like reading a book? Confuse to looking for your favorite book? Or your book was rare? Why so many problem for the book? But virtually any people feel that they enjoy with regard to reading. Some people likes looking at, not only science book but also novel and Statistical Methods in Bioinformatics (Statistics for Biology and Health) as well as others sources were given know-how for you. After you know how the great a book, you feel need to read more and more. Science book was created for teacher as well as students especially. Those textbooks are helping them to put their knowledge. In various other case, beside science e-book, any other book likes Statistical Methods in Bioinformatics (Statistics for Biology and

Health) to make your spare time a lot more colorful. Many types of book like here.
